

How to setup eConsent Study Tracker Push/Pull from REDCap Feature

Benefit from the convenience of pulling your fully signed eConsent pdf directly from REDCap into [Study Tracker](#). This feature offers the assurance that the correct pdf is uploaded into Study Tracker for FSM Policy Compliance while reducing the steps involved in completing this task. This handout is designed to provide the setup requirements in both REDCap and Study Tracker. All setup requirements must be completed in order for this feature to activate. **Please note:** Only one REDCap project can be set up per NU IRB study in Study Tracker.

Study Tracker Setup Requirements

Study Tracker will automatically import any study from the IRB that receives an “Approved” or “External IRB” study status. Any study with an active IRB status in Study Tracker is eligible for setup of this feature.

Compliance	IRB Number	Name	Status	Accrual	Favorite
	<input type="text"/>	<input type="text"/>	Show all		Show all
✓	STUXXXXXXXX	Demo/Test Study	Approved	47	★

REDCap Setup Requirements

The IRB must approve your usage of eConsent in REDCap for every study that will be utilizing eConsent. Approval of specific usage of the Study Tracker Push/Pull feature is not needed in order to use this feature. Once the eConsent instrument is setup in REDCap, ensure the following setup requirements are met for your REDCap project:

1. The eConsent project exists on Northwestern's instance of REDCap. eConsent instruments housed on affiliate instances of REDCap will not work.
2. Only one REDCap project at a time can be linked to an STU in Study Tracker (one REDCap API per study).

3. The project does not have longitudinal feature enabled.

4. "Record_id" is the first field on the first instrument.

5. An instrument named "econsent" exists in the project.*

**If you are renaming an instrument that previously existed ensure that the new name of "econsent" replaced the existing name by checking the Codebook.*

6. The field "consent_date" exists in the project and "consent_date" has field validation in the format yyyy-mm-dd.

7. The field "case_number" exists in the project; and must be unique for each record.

8. The eConsent Framework feature, under Survey Settings, is only a requirement of utilizing eConsent for FDA studies. However, it is HIGHLY recommended that all studies enable this feature for the signature validation and file repository benefits. When the eConsent Framework feature is enabled in REDCap, you must also enable the option "Allow e-Consent responses to be edited by users?". This will allow a study team member to go back in and append the required case number to the completed eConsent form which allows the participant matching in Study Tracker to take place.

e-Consent Framework Options:

For e-Consent it is sometimes required to include the consenting participant's name (and date of birth in some cases) on the final consent form as extra documentation of their identity. Below you may select fields used to capture that info. You may also enter the current e-Consent version and e-Consent type for this form. The values for the fields below will be automatically inserted into the footer of the PDF consent form that the participant will review at the end the survey, after which that PDF 'hard-copy' will be archived in the File Repository. [Read more](#)

Allow e-Consent responses to be edited by users?

9. Add the user "study_tracker_webservice" to your project with API import/export rights and "Full Data Set" privileges under "Data Export" rights.

Role name <small>(click role name to edit role)</small>	Username or users assigned to a role <small>(click username to edit or assign to role)</small>	Expiration <small>(click expiration to edit)</small>	Project Design and Setup	User Rights	Data Access Groups	Data Export Tool
—	study_tracker_webservice (Study Tracker)	never	✓	✓	✓	Full Data Set

10. Complete the [REDCap API Token Request Form](#). This will initiate the process of setting up the API token for the REDCap project to be linked to your study in Study Tracker. If there are any issues with the setup, the App Support Team will contact you to make the necessary corrections. Otherwise, you will then receive a confirmation email when the setup is complete.

How to use the eConsent push/pull feature in REDCap & Study Tracker

After setup is completed, the feature may be used. This feature only works when the key fields that complete the communication between systems are recorded correctly.

In REDCap:

After a participant completes the eConsent form, a study team member must edit the form to append a case number to the participant completed consent form and save the form with case number.

In Study Tracker:

Create a participant profile for the newly consented participant and be sure to add the **same case number** for the participant as entered into the eConsent in REDCap and save the profile.

Identifiers

NMFF Record Number

NMHC Record Number

NMH Record Number

Case number

After the participant’s profile has been created you will then log the Consented activity by selecting the “Consents” option under the participant’s Activity tab. From the drop down option select “E-Consented” and the consented date as recorded in REDCap will populate along with the pdf form that matches and click “SAVE”.

The screenshot shows the REDCap 'Activity' tab interface. At the top, there are tabs for 'Basics', 'Activity', 'Budget tracking', 'Schedule', and 'Research notes'. Under the 'Activity' tab, there is a 'Category filter (optional)' section with radio buttons for 'Consents', 'Uploads', 'Forms', and 'Other Activities'. A purple arrow points to the 'Consents' option. Below this is an 'Activity' dropdown menu set to 'E-Consented'. A purple box highlights a table entry for 'E-Consents' with a 'Select?' column containing a radio button and a 'Consent Date' column containing '2021-10-11'. Below the table are fields for 'Date' (2021-10-11), 'State' (Completed), and 'Notes (optional)'. At the bottom are 'Save' and 'Cancel' buttons.

Participants who have signed an eConsent form that has pulled form REDCap into Study Tracker will show as “E-Consented” in Study Tracker.
